Currie's water restrictions lifted

TasWater is pleased to confirm the removal of water restrictions for Currie, effective from Sunday 30 June.

The Currie township has been on Stage 2 water restrictions since late January after monitoring of the aquifer supplying the town's water treatment plant indicated a significantly reduced level.

Following recent falls of rain and with more forecast, the aquifer levels are beginning to show signs of improvement. We will continue to monitor levels closely to ensure the sustainability of the supply until Currie is connected to TasWater's new Grassy Water Treatment Plant.

TasWater appreciates the cooperation of our customers in helping us to maintain a secure water supply over the dry summer and autumn period.
