### **TasWater working to resolve Ulverstone's water quality**

Some customers in Ulverstone have experienced discoloured water due to a variation of the quality of the raw water source.

TasWater is now supplying Ulverstone from the Forth Water Treatment Plant.

Water mains are being flushed clear of the discoloured water but it is not expected to back to normal until after 6 PM this evening.

This flushing process may cause low pressure or a loss of water supply in some more elevated areas of Ulverstone.

TasWater appreciates the patience of customers while this issue is being resolved.
